About Me

Always had a curiosity for how things worked. I would tinker with computers and electronics to fix it or make it better.

Midway through my tenure at Asset, I found a love for programming solutions. Now, fifty plus online courses and YouTube videos later, found a career for my creative outlet.

Interests

When I'm not coding, I enjoy spending time with family and friends.

I like exercising, playing video games, watching football and anime, reading manga, and eating spicy food that I shouldn't.
